

# wait4(2) — Linux manual page

[NAME](#) | [SYNOPSIS](#) | [DESCRIPTION](#) | [RETURN VALUE](#) | [ERRORS](#) | [CONFORMING TO](#) | [NOTES](#) | [SEE ALSO](#) | [COLOPHON](#)

 **WAIT4(2)****Linux Programmer's Manual****WAIT4(2)****NAME** [top](#)

wait3, wait4 - wait for process to change state, BSD style

**SYNOPSIS** [top](#)

```
#include <sys/wait.h>
```

```
pid_t wait3(int *wstatus, int options, struct rusage *rusage);
pid_t wait4(pid_t pid, int *wstatus, int options,
            struct rusage *rusage);
```

Feature Test Macro Requirements for glibc (see [feature\\_test\\_macros\(7\)](#)):

```
wait3():
    Since glibc 2.26:
        _DEFAULT_SOURCE
        || (_XOPEN_SOURCE >= 500 &&
            ! (_POSIX_C_SOURCE >= 200112L
                || _XOPEN_SOURCE >= 600))
    From glibc 2.19 to 2.25:
        _DEFAULT_SOURCE || _XOPEN_SOURCE >= 500
    Glibc 2.19 and earlier:
        _BSD_SOURCE || _XOPEN_SOURCE >= 500

wait4():
    Since glibc 2.19:
        _DEFAULT_SOURCE
    Glibc 2.19 and earlier:
        _BSD_SOURCE
```

**DESCRIPTION** [top](#)

These functions are nonstandard; in new programs, the use of [waitpid\(2\)](#) or [waitid\(2\)](#) is preferable.

The **wait3()** and **wait4()** system calls are similar to [waitpid\(2\)](#), but additionally return resource usage information about the

child in the structure pointed to by *rusage*.

Other than the use of the *rusage* argument, the following **wait3()** call:

```
wait3(wstatus, options, rusage);
```

is equivalent to:

```
waitpid(-1, wstatus, options);
```

Similarly, the following **wait4()** call:

```
wait4(pid, wstatus, options, rusage);
```

is equivalent to:

```
waitpid(pid, wstatus, options);
```

In other words, **wait3()** waits of any child, while **wait4()** can be used to select a specific child, or children, on which to wait. See [wait\(2\)](#) for further details.

If *rusage* is not NULL, the *struct rusage* to which it points will be filled with accounting information about the child. See [getrusage\(2\)](#) for details.

## RETURN VALUE [top](#)

As for [waitpid\(2\)](#).

## ERRORS [top](#)

As for [waitpid\(2\)](#).

## CONFORMING TO [top](#)

4.3BSD.

SUSv1 included a specification of **wait3()**; SUSv2 included **wait3()**, but marked it LEGACY; SUSv3 removed it.

## NOTES [top](#)

Including *<sys/time.h>* is not required these days, but increases portability. (Indeed, *<sys/resource.h>* defines the *rusage* structure with fields of type *struct timeval* defined in *<sys/time.h>*.)

### C library/kernel differences

On Linux, **wait3()** is a library function implemented on top of the **wait4()** system call.
